## Workshop 1- HTML: step 1

It's not hard to make your own web page! All you need is a simple simple word processor to create your site. With our workshops you will learn HTML and CSS which are the first two foundations for the development of functional web pages. First, you start by learning HTML and therefore clicking on **"HTML: step 1"** in the menu above!

Great thanks to Pelle Wårja letting us borrow his pictures and same text etc (<http://www.batuulis.se>).
