

# Coding Bootcamp (HTML & CSS)

[Home](#) [HTML: step 1](#) [HTML: step 2](#) [CSS: step 1](#) [CSS: step 2](#)

## HTML: step 2

At this workshop we continue to work with the W3Schools tutorial as a base.

Go to w3schools ([www.w3schools.com](http://www.w3schools.com)) and click on **Learn HTML** and go through the remaining chapters of their tutorial. Some chapters can be skipped at the moment, these chapters are marked in the list below. Not worried, We will return to these chapters later on at our CSS labs.

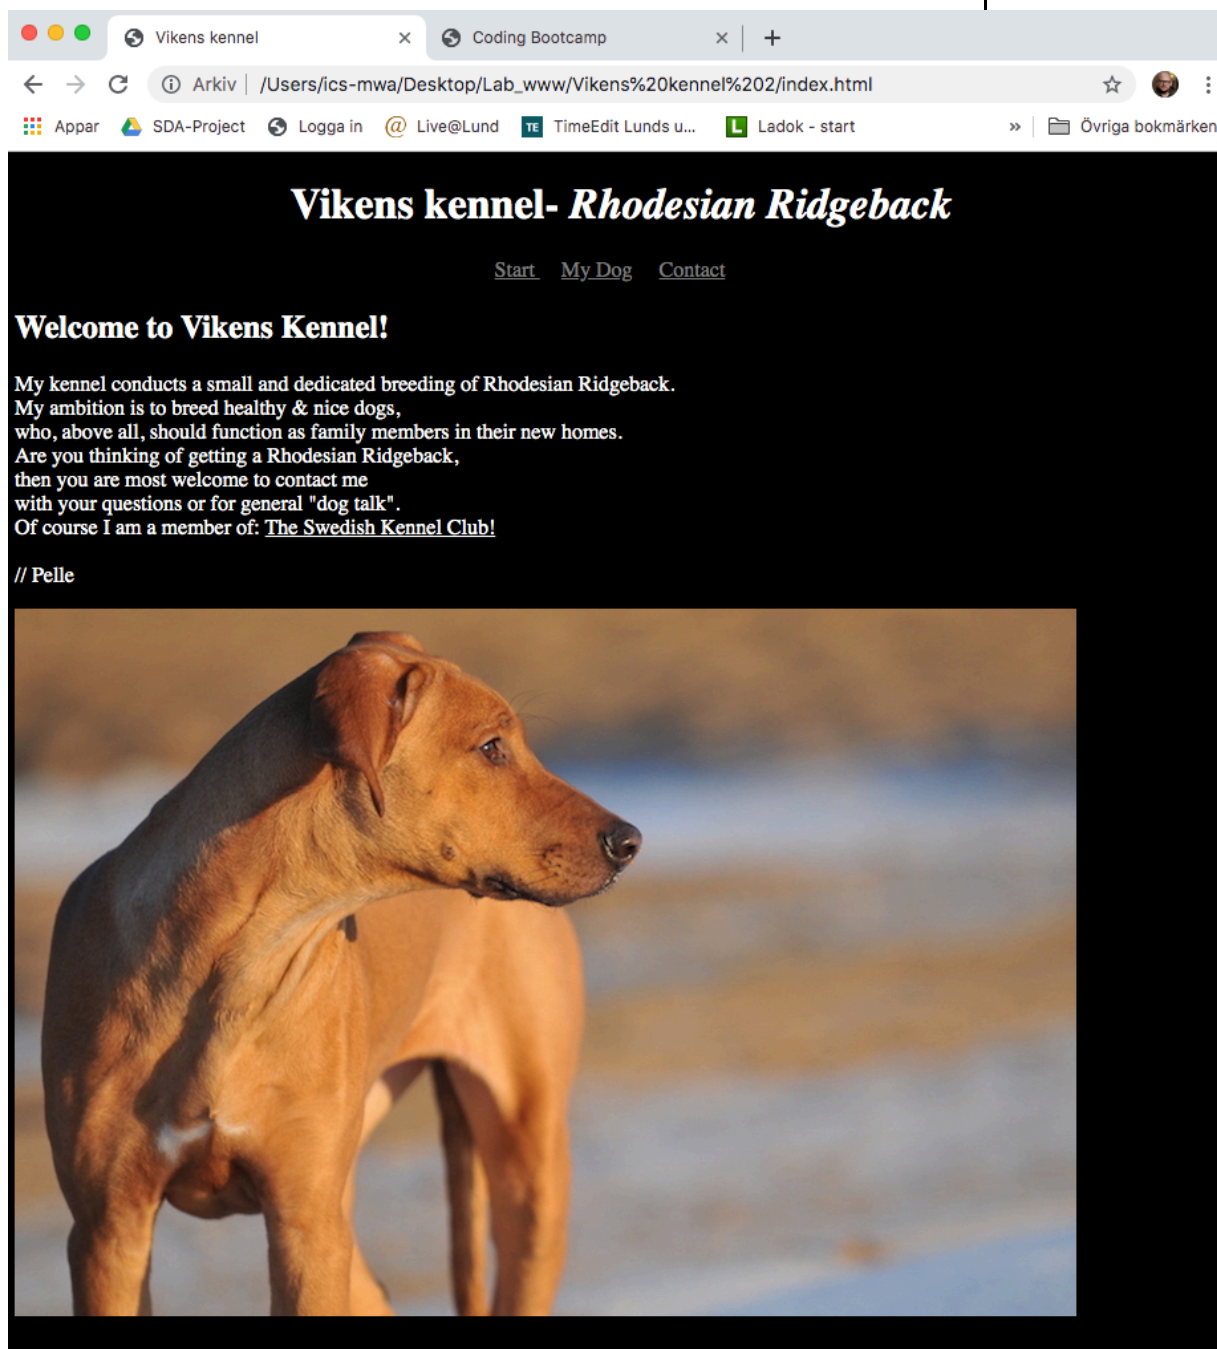

- HTML CSS
- HTML Links
- HTML Images
- HTML Tables
- HTML Lists
- HTML Blocks
- HTML Classes
- HTML Id/li>
- HTML Iframes
- HTML JavaScript
- HTML File Paths
- HTML Head
- HTML Layout
- HTML Responsive
- HTML Computercode
- HTML Entities
- HTML Symbols
- HTML Charset
- HTML URL Encode
- HTML XHTML

## Continue to develop your own page: "Vikens Kennel"

### Regarding chapter: "HTML Links"

Add a link at the bottom of Pelle's introductory paragraph. The link should refer to "The Swedish Kennel Club" and it should be open in a new window or tab. You can also try to change properties for the

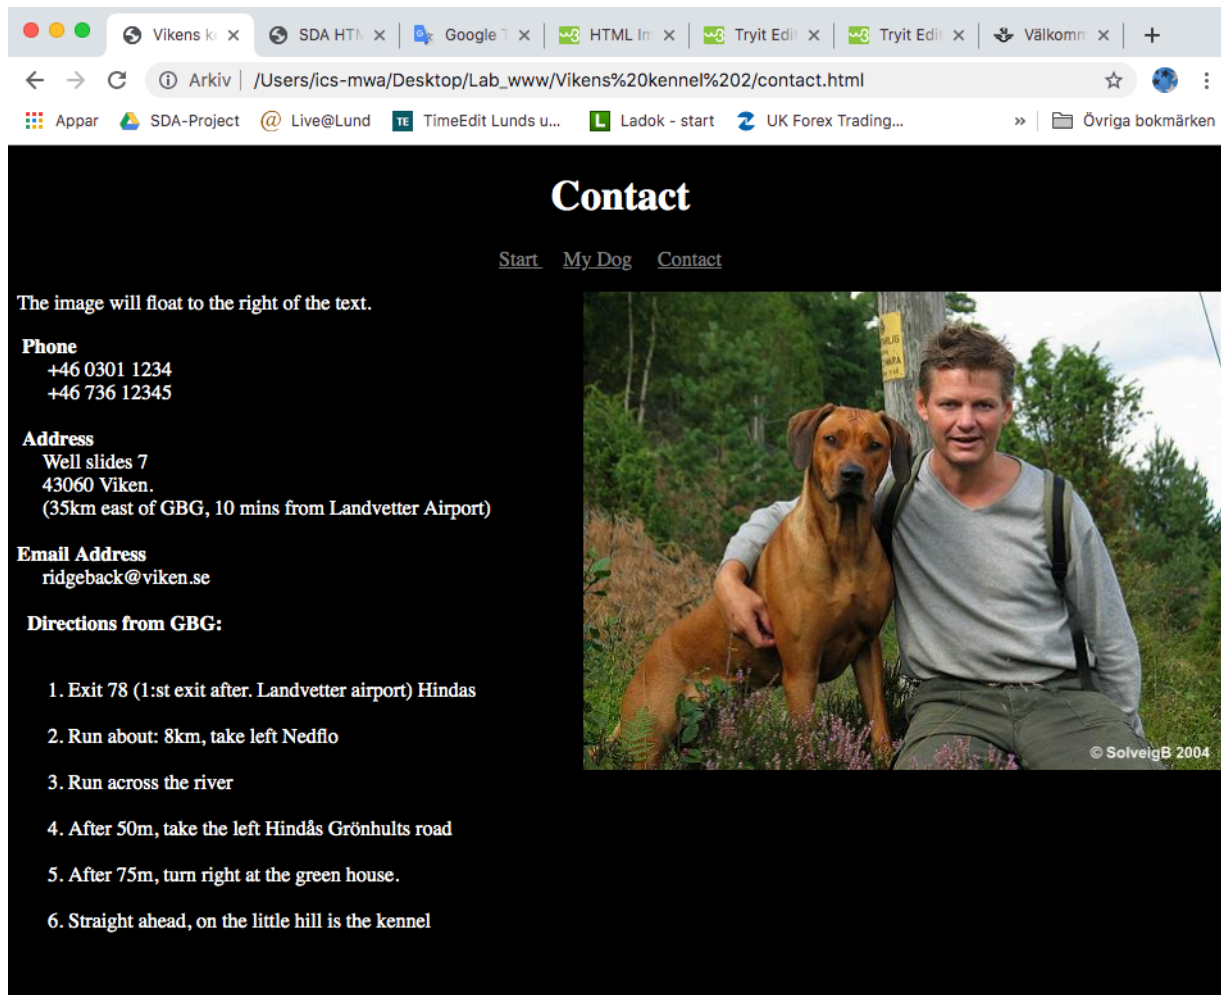

link (visited, hover, active etc) Below you will see how to design and where to place your link at index.html:

## Regarding chapter: "HTML Images"

Make sure you use the: **alt**, **width** and **height** attributes for all your images if you didn't use them during Lab 1.

Use the CSS float property to let the image at your "Contact"-page float to the right of your text. When you are done, the page should look like the following image:

## Regarding chapter: "HTML Tables"

Use the CSS float property to let the image at "my dog"-page float to the right of your text (same as you did on your contact page!). You should also create a pedigree for Diva. Your pedigree should be created in a table. When you are done, the page should look like the following image:

Vikens kennel

## Regarding chapter: "HTML File Paths"

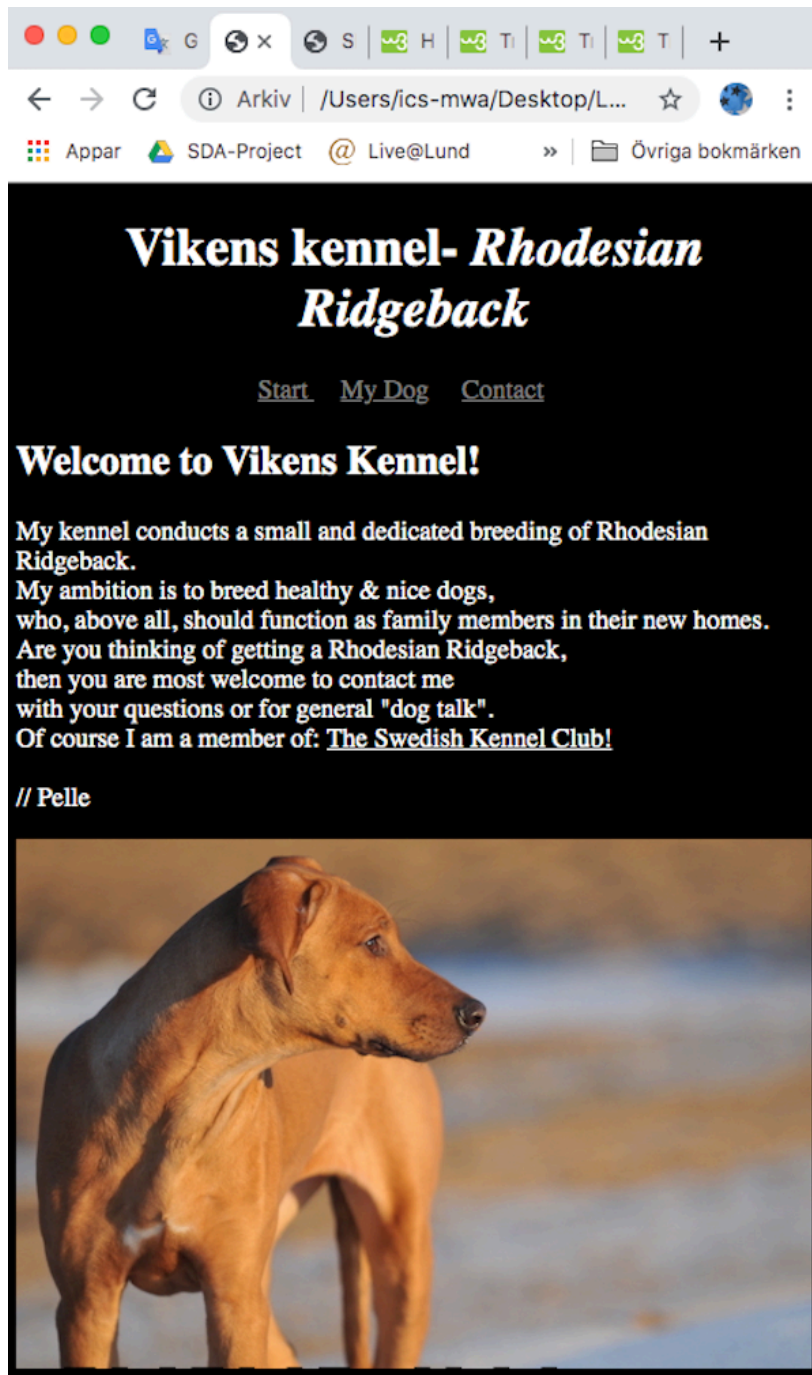

Create a single map for your pictures only and place all the images used on your site in this folder.

## Regarding chapter: "HTML Head"

The <meta> element is used to specify which character set is used, page description, keywords, author, and other metadata. Use appropriate <meta> elements to specify your site (haracter set, page description, keywords, author etc).

## Regarding chapter: "HTML Responsive"

HTML5 introduced a method to let web designers take control over the viewport, through the <meta> tag. Use this <meta> tag on your site. Also, the images on your site should be responsive, use the max-width Property! When you are done, for example, your landing page should look like the picture below:

## Regarding chapter: "HTML Entities"

Read through this chapter and keep it in mind for the future.

## Regarding chapter: "HTML Symbols"

Read through this chapter and keep it in mind for the future.

## Regarding chapter: "HTML Charset"

Read through this chapter and keep it in mind for the future.  
Promise me that you always use the standard: UTF-8 (Unicode),  
then you will avoid many problems in the future.
